

Marked Up Copy of Amended Claim

1 31. (amended) A method of manufacturing a radio frequency identification (RFID) transceiver,
2 comprising the steps of:
3 providing a sheet of polymer film having first and second halves separated by a boundary;
4 mounting an RFID transceiver integrated circuit on the first half of the sheet; and
5 folding the sheet in half along the boundary so that the first half of the sheet overlies the second
6 half of the sheet with the transceiver between the two halves; and
7 sealing together the first and second halves of the sheet along a contour which encircles the
8 RFID transceiver integrated circuit.
